JAVA DESKTOP GAME - PROJECT TITLE

Sholo Guti & Bagh-Chhagol Game

Two traditional Bangladeshi village games on one board, with a smart computer opponent.

2	37	16	3	3
GAMES	BOARD POINTS	GUTI / GOATS	TIGERS (BAGH)	AI LEVELS

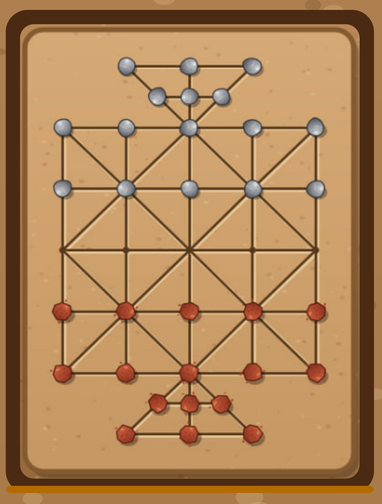

01 - OVERVIEW

About the Project

- A Java desktop game with two traditional village games: **Sholo Guti** (16 Guti) and **Bagh-Chhagol** (Tiger and Goat).
- Both games use the same **37-point board**: a grid with diagonals and a triangle at each end.
- Play against the **Computer** (Easy, Medium or Hard), or play with a friend in **Two Players** mode.

BUILT WITH

- **Java, Swing and Java2D**
- IntelliJ IDEA
- Minimax algorithm with alpha-beta pruning
- Hint, pause, timer and How-to-Play guide
- All graphics and sounds generated in code

Sholo Guti: Brickbats vs Small Stone

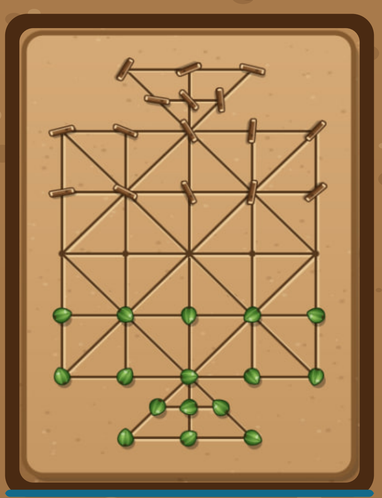

02 - GAME ONE

Sholo Guti (16 Guti)

- Two players, with **16 guti** each. The first player (bottom side) moves first.
- **Move:** slide one guti per turn to an empty neighbouring point along a line.
- **Capture:** jump over an enemy guti into the empty point right behind it. Several jumps in a row are allowed.
- **Win:** capture every enemy guti or block them so they cannot move. With a time limit, the player with more guti wins.

CHOOSE YOUR GUTI

- Small Betel Nut
- Stick
- Brickbats
- Small Stone
- Each player must choose a different type.

Sholo Guti: Small Betel Nut vs Stick

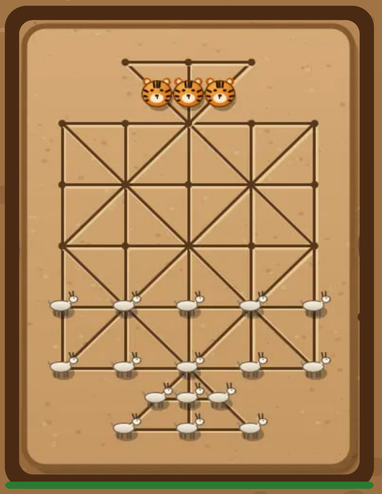

03 - GAME TWO

Bagh-Chhagol (Tiger and Goat)

- **3 Bagh** (tigers) play against **16 Chhagol** (goats). The goat player moves first.
- **Goats:** first place all 16 goats on empty points, then move them one step at a time. Goats never capture.
- **Tigers:** step to a neighbouring point, or jump over a goat to eat it. Several jumps in a row are allowed.

HOW TO WIN

- **Tigers:** eat 8 goats (or all 16, as chosen)
- **Goats:** trap all 3 tigers so they cannot move
- **Time limit:** tigers win if they ate 8 or more goats

Bagh-Chhagol: 3 Tigers vs 16 Goats
